New York Office
15 BROAD STREET

NEW YORK FILTER

DO YOU WANT your water supply for domestic or manufacturing purposes made bright, sparkling and wholesome, free from Typhoid and other disease germs

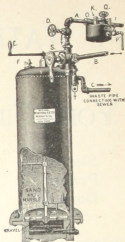

WE CAN DO IT!

ISSUED DECEMBER, 1901.

42151010-10101010

NEW YORK FILTER.

HOUSE FILTER.

See larger cut on page 6.

The Filter is connected with the main supply pipe in the basement or cellar of a residence or other building. *All of the water entering the premises passes through the Filter, is thoroughly filtered and purified, and is drawn bright, clear and sparkling from every spigot, free from typhoid germs. The entire operation of the Filter is controlled by one valve, and is therefore so simple that the most ignorant domestic can readily understand and operate it.*

One of the luxuries of filtered water is, that where a porcelain-lined bath-tub is used and new sanitary improvements in the

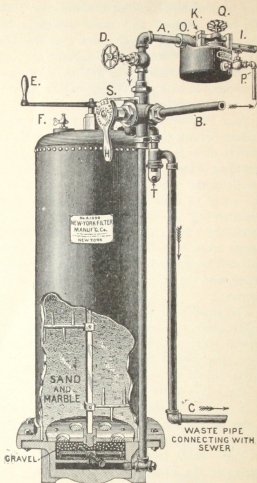

way of plumbing are put in the house, they are never stained and made unsightly by the mud found in most water supplies, nor are the valves throughout the house cut out by the sand and grit. The saving of expense in connection with repairs to plumbing, valves, etc., soon pays for the cost of the Filter.

Your Plumber can attach the Filter to your present service pipe in a few hours; all you have to do is to turn a handle and get bright, sparkling water. Then once a day turn this handle in the opposite direction, which allows the water to enter the Filter in the reverse direction—at the bottom—and after flowing about ten minutes, all the dirt and disease germs taken from the water during the day's run will be washed out of the Filter into the sewer, and the Filter will be ready again for service.

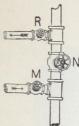

The small tank shown at the top of Filter holds alum in solution; a few pounds of crystal alum put into this tank will last for days, one pound being sufficient for every 7,000 gallons of water filtered.

The action of the alum is as follows:

It unites with the carbonate of lime in the water and produces hydrate of alumina—an entirely harmless substance like the white of an egg—which forms a coating on the sand grains in the Filter-bed, and stops microbes and organic matter from passing through with the water.

NEW YORK FILTER.

VERTICAL TYPE SECTIONAL WASHING PRESSURE FILTERS.

30 in. diameter up to 10 ft. diameter.

See foot note on page 9.

For Hotels and all places requiring clear, bright water, free from typhoid germs and all matters in suspension. Also for Boiler Feed and all manufacturing purposes.

SECTIONAL WASHING.

In the Sectional Washing Filters shown in this cut, the wash water, *under pressure*, enters the Filter at bottom, passes up and out at top; the entire force of this reverse current used in washing is directed against one-third of the bed only, for about five minutes, then it is shut off and the central one-third of the bed is scoured in the same manner; lastly, the remaining one-third is washed.

By this system of washing the Filter-bed, a thorough attrition and scouring of particles is accomplished, as the entire supply of water and pressure is directed against the one-third of the bed being washed, and no partitions are necessary to divide the bed, as the current is forced up nearly in a straight line. No power or machinery for stirring the bed is required when cleansing Filters by sectional washing.

Sectional washing is used in all our Filters over 20 inches in diameter.

Note.—The inside and outside parts and filtering material are shipped separately. We do not furnish the cement and rubble used in the bottom of Filters above 30 inches diameter size, nor the waste pipe, broken pipe and unshaded parts shown in cuts. Delivery in all cases f. o. b. cars at our works, Jersey City, N. J.

FILTERED WATER MEANS

To Householders :

A saving in doctors' and plumbers' bills. Pure, bright water from every spigot, free from disease germs.

To Plumbers :

An enlarged business through sale and installation of filters.

To Bottlers :

Clear, sparkling beverage, free from all specks.

To Laundries :

Saving in soap; white laundry work; increased trade.

To Paper Mills :

Snowy pulp; spotless paper.

To Textile Manufacturers :

Uniform color in dyed goods. Pure white in white goods.

To Water Works :

Additional consumers ; larger dividends.

To Boilers :

A feed water free from mud and the oil and grease in condensed steam water.

IN WRITING FOR INFORMATION REGARDING
FILTRATION, PLEASE STATE.

- 1st.—What is the source of water supply?
2nd.—The size of supply pipe to filter.
3rd.—The maximum pressure in supply pipe.
4th.—The maximum number of gallons per minute to be filtered.
5th.—Is the water clear, turbid, hard or soft?
6th.—Has the water any odor or taste, or does it contain any vegetable matter?
7th.—Is the water used for drinking or for mechanical purposes?
8th.—If water is for boiler feed, please state horse power of boiler and the steam pressure carried.
9th.—Send us a copy of any analysis you have of the water.

See Schedule of Sizes, Capacities, etc., page 12.

Upon the receipt of the information above requested, we will either answer by return mail, or we will give the matter personal attention. We will, in all cases, *guarantee* results to be satisfactory in every particular.
